Who we are

The **Radiologische Allianz** is an aggregation of 11 radiological practices in Hamburg, in which more than 50 highly qualified doctors work. We offer our patients a wide range of radiological and nuclear medical diagnostics procedures and radiation therapies.

We attach the utmost importance to teamwork. Interdisciplinary collaboration is absolutely necessary in order to offer the best possible treatment to our patients. Next to the rapid exchange of information with referring doctors we have close contacts with both medical research and the producers of our equipment. Therefore, we are always at the cutting edge of science and technology.

Alongside the best medical care, our goal is to offer each of our patients the best possible comfort and service. This includes short waiting times, individual and personal supervision and, last but not least, rooms where you can feel comfortable.

We also know that technology is only as good as the people operating it. It cannot substitute for the eye of a specialist or for professional collaboration with other medical specialists.

If you have any questions, please visit us on our website www.radiologische-allianz.de or contact us anytime.
